

## HealthReach Collection Overview

This data was last updated on 01/01/2019.

### Description of data

The data in these visualizations comes from HealthReach (<https://healthreach.nlm.nih.gov>). The HealthReach database contains 762 Titles, 394 Health Topics, and 61 Languages. Every title is available in English and one or more language(s). The collection is comprised of 6537 documents, 1148 audio recordings, and 1143 videos, with 8828 total materials.

Our data is comprised of every unique title and all of its associated material combinations of formats and languages. Here is how this data is counted:

1. Titles: Each title has a unique URL that goes to its record, which is called the Resource Properties page. All materials associated with the title are listed on this page. We count a title as 1, even though its translations in various formats may add up to 30 different materials.
2. Materials: The materials associated with each title are available in particular languages and formats. Each material has its own unique URL.

For example, the title **Concerns and Discomforts of Pregnancy: Oral Health** is available in 6 languages, and those translations are available in 3 formats (as documents, videos, and audio recordings).

1 title in 6 languages x 3 formats = 18 materials

Every month we will update these visualizations with the latest data that we have.

### Top 10 Non-English Languages in the HealthReach Collection:

- The top 10 languages in all formats are as follows: Spanish 646, Russian 479, Arabic 422, Somali 422, Chinese, Simplified 410, Chinese, Traditional 400, Korean 382, French 366, Japanese 358, and Vietnamese 271.
